

Universal Pickle

By Black and Ivy, Inc.

If you are tired of rebuilding your pull cords, then leap into the future of pull cord technology with the Black & Ivy "Universal Pickle", and eliminate one of the weak links in your gun club profits.

What is the "Universal Pickle"?

- It is a solid state assembly that will control ANY machine: i.e.: 12vdc, 28vac/dc, 120vac, 120vac-solenoid release.
- It will control TWO 12vdc machines without cross talk.
- It will also control a 12vdc machine AND a 120vac machine from the same pull cord.
- It will accommodate all your machine control requirements.
- No mechanical moving parts.
- It is an integrated assembly that retrofits into a standard Winchester #V400 release housing. It is a ONE piece assembly that includes the cover, cover gasket, membrane switches, and the solid state components. The electronic components are encapsulated by an epoxy potting material that protects them from moisture and impact.

Black and Ivy, Inc
100 Knoll Dr.
Carson City, NV 89703

With over 30 years of shotgun sports experience, **Black and Ivy** takes pride in engineering products designed by shooters for shooters.

Installation is easy:

- Remove the old cover assembly and cover gasket, and discard.
- Remove the micro switch assembly, and discard.
- Connect the three wires to the "Universal Pickle" terminals.
- Screw down the assembly to the V400 housing with the included screws.
- Installation complete.
